BI Analyst

Position Overview:

The BI Analyst is responsible for empowering decision-makers with accurate, real-time, actionable insights that enhance workforce efficiency, increase productivity, strengthen market positioning, and improve the client experience. Through "telling the story with data," our team will make intelligent business decisions that will impact our clients in a positive way.

The ideal candidate will need problem solving and critical thinking skills not only to collect, transform and interpret data, but also to develop innovative ideas and solutions using data.

Responsibilities:

- Work closely with business partners to define and prioritize BI solutions
- Maintain/develop SQL views and stored procedures to support the structure of the data models
- Design, develop, test, and deploy Power BI models
- Maintain/develop reports and dashboards
- Model documentation and training
- Special projects as assigned

Qualifications:

- Bachelor's Degree in Applied Statistics, Computer Science or Engineering
- 2 years experience working with cross functional teams, managing products and designing technology solutions
- Proficient in SQL
- Power BI and Power Automate experience
- Experience with MS Teams and API integration
- Understanding of data visualization best practices, storytelling with data
- Attention to detail and demonstrated analytic and problem-solving skills
- Excellent communication skills (both verbal and written), with a customer-centric mindset
- Resourceful, take initiative and ownership in a fast-paced business environment
